

Overmount (Drop-In) Sink Installation Instructions

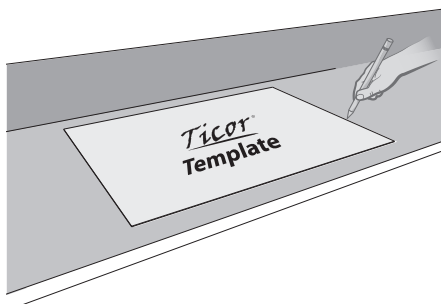

Please read these instructions carefully before installation. We recommend that our sinks be installed by qualified professionals, and we are not responsible for damage to countertop or sink caused during installation.

You will need a marker, screwdriver, silicone adhesive, rag, appropriate tool to cut countertop (varies)

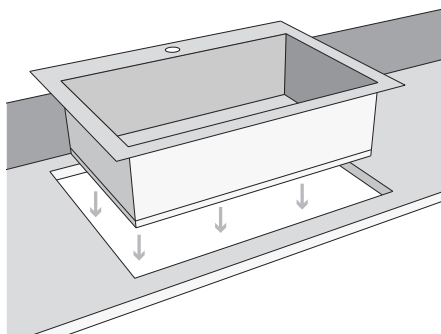

- 1** Unpack sink and check all components: sink, template, mounting brackets

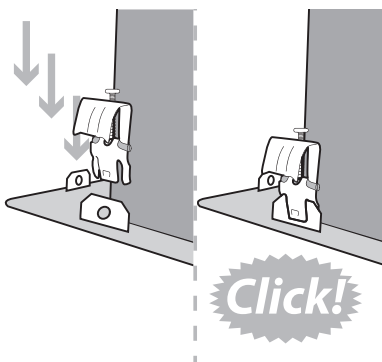

- 2** Place template on countertop, and trace outline

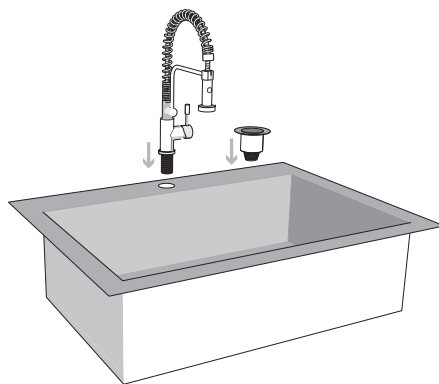

- 3** Make cut in countertop, verify hole size, drop sink in and ensure sufficient room for brackets

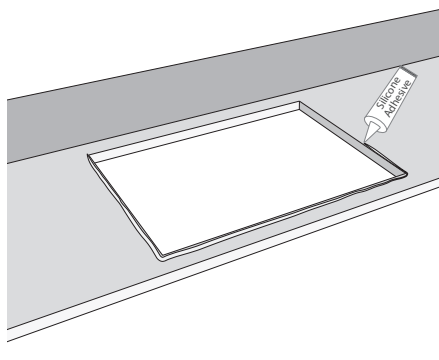

- 4** Attach clips to mounting brackets. *Number of brackets varies depending on sink model*

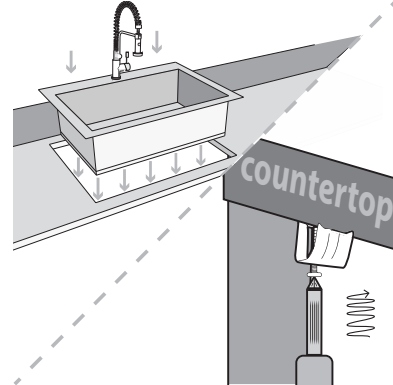

- 5** Install faucet and drain assemblies

- 6** Apply waterproof silicone adhesive around the cutout on the countertop 1/4" around the opening

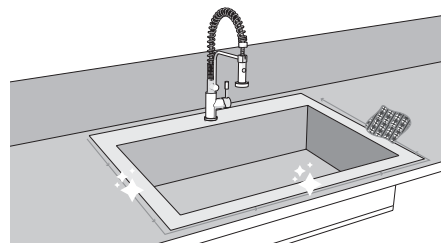

- 7a** Bend the clips back and place the sink into the cutout.

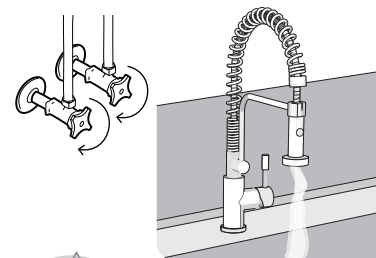

- 7b** Tighten the bracket screws until sink is tight to the countertop

- 8** Wipe away all excess silicone from countertop and sink

- 9** Make the drain connections and attach water supply. Run water into the sink and check for leaks.

Check for leaks at all connection points for both sink and faucet
